

WEDGE ANTI VIRUS MODULE

75 percent of businesses worldwide are not protected at the network level.

The Web is the fastest growing attack vector for cyber criminals against business networks. Traditional security measures such as URL-based Web filtering or endpoint-based protection cannot provide unified protection as these attacks are targeted, change rapidly, and are often propagated through legitimate sources, leaving organizations vulnerable to infection and data loss.

BeSecure Web Gateway allows you to stay ahead of sophisticated attacks stopping them before they have a chance to reach vulnerable and information-laden endpoints. Further to its specialized malicious content detection, BeSecure provides a unified Web security platform for e-mail security, spam, acceptable usage, and content filtering with its Message Filter and Web Filter Modules.

Key Network Security Technologies

- Industry-first deep content inspection technology: Reassembles the entire content of every Web transaction and scans for malicious code in real time, going beyond the detection and accuracy limitations of packet inspection.
- Layered Protection: Increase and apply Defence in Depth practices to existing network and end point based defenses against web threats.
- Bi-directional Web Scanning: Purpose built for high performance malware scanning and filtering, bi-directional traffic inspection looks at both inbound and outbound traffic for signs of malicious content, stopping it from entering your network.
- LAN-bypass and High Availability Clustering: Ensures your network and Web security is always "on".
- Configurable automation features: Automatic updates, alerts, administration, reporting.
- BeSecure Reporter: Increase security and control by using predefined or customized administrative roles; monitor overall system status easily with convenient, at-a-glance dashboards and status indicators.

DEPLOYMENT POINT

- Web/Network Gateway
- Inline Transparent Proxy
- Offline Proxy
- ICAP Server
- WCCP Server

THREAT PROTECTION

- Web Threats
- Malware
- Spyware
- Trojans
- Key Loggers
- Rootkits
- Bots

KEY BENEFITS

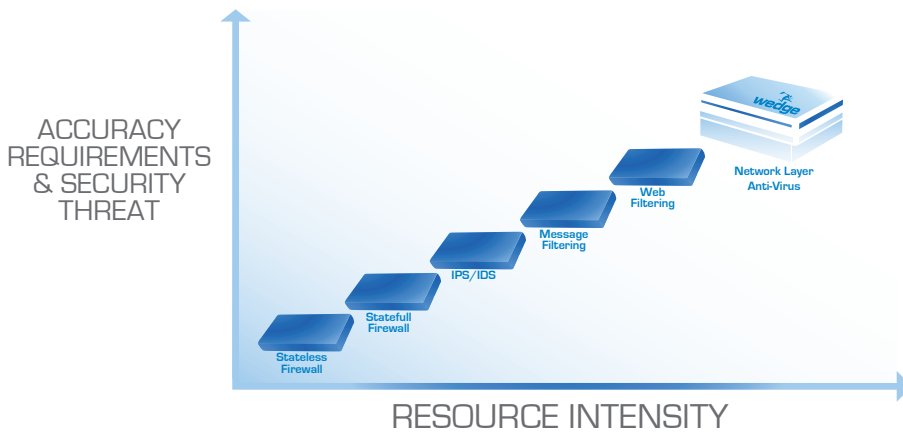

- Stops Web threats at the gateway
- High performance engine ensures minimal system impact even in largest deployments
- Automated updates and management reducing operation overhead
- Specialized Protection against malware
- Layered defence solution
- Ensures business reputation and continuity
- Reduces IT Staff troubleshooting hours
- Same protection level for your network, mobile devices, and Web site

KEY FEATURES

- Heuristic engine to combat emerging threats
- End user-Web site activity management
- Scalability through performance
- Flexible deployment and integration with existing infrastructure and with added BeSecure modules
- Fail over functions

Wedge BeSecure Web Gateway Modules

In addition to its gateway security appliance, BeSecure Web Gateway offers award-winning performance and architecture to messaging security, anti-spam, anti-phishing, acceptable usage, content filtering and URL filtering with its additional Message Filter and Web Filter Modules. Adjust features as you need them on one single BeSecure appliance or dedicated units throughout your network.

Wedge Networks, Inc.

provides high performance network based Web security solutions to enterprises and service providers worldwide. Our technology leadership in deep content inspection allows organizations to protect against new and emerging threats that traditional scanning methods have difficulty intercepting and controlling.
